GÜHROForce ***Clamping force tester***

For precise testing of the clamping force
of hydraulic chucks

GÜHROForce Clamping force tester

Precise clamping force testing for hydraulic chucks

Clamping force under control

If hydraulic chucks lose their clamping force, users risk high consequential costs due to tool slippage, dimensional deviations and quality defects.

The GÜHROForce clamping force test equipment allows the clamping force of hydraulic chucks to be checked quickly and reliably. Thanks to its modular design, a single base system is sufficient for multiple diameters, thereby reducing purchase and storage costs.

Its purely mechanical design makes GÜHROForce less susceptible to temperature fluctuations and ensures reliable, reproducible measurement results. Combined with its ease of handling, GÜHROForce makes clamping force testing more efficient and cost-effective than ever before.

User-friendly and precise clamping force assessment

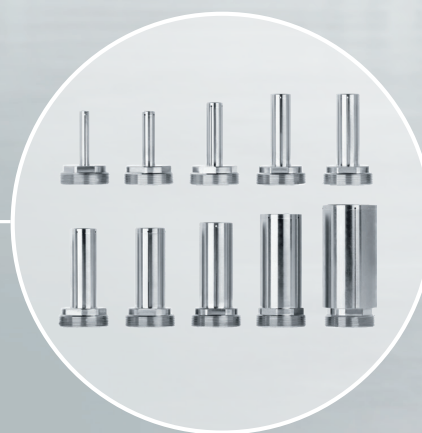

Easy in application, precise results: The results can be read quickly and conveniently on the dial gauge with a scale graduation of 0.005 mm.

Reliable thanks to a purely mechanical system

The purely mechanical operating principle provides robust clamping force measurement with reduced influence from temperature fluctuations.

Flexible thanks to its modular design

One device for many diameters: thanks to interchangeable proofing arbors, all standard hydraulic chucks can be tested using just one base system.

Proofing arbor diameter (mm):

6, 8, 10, 12, 14,
16, 18, 20, 25, 32

Get yours now!

VALUE KIT

Everything you need for clamping force testing in one set:

The value kit #8195 10.000 combines GÜHROForce (#8194) with ten proofing arbors in standard diameters – cost-effective, flexible and ready for use.
