GTMS Gühring Tool Management Software

Logistics Pro module

Everything you need for
warehouse management & tool planning

Your vision – our software

Individual & flexible

Your path to digitalisation

To digitise your entire production process, you need just one piece of software: Gühring Tool Management Software (GTMS). From automatic tool ordering through to analysing tool data, GTMS covers a company's most common requirements.

And through all of this, it always follows one goal:

Minimising your administrative workload and ensuring that everything you need is available in the right quantity, at the right place, and at the right time. And thanks to different modules, the software can be individually tailored to your needs and applications.

get the most out of evaluations and analyses

calculate minimum stock levels based on consumption and demand

tools for simple, paperless communication between users

guaranteed availability thanks to reservation option

Digitalisation for experts

A failure to perform evaluations and analyses often means that potential remains unexploited in production. Employees don't know where tools are in production and are more likely to estimate stock levels using their "gut instinct", which leads to unnecessarily high tool costs. Product and warehouse data management is neglected. For businesses that want to achieve more, an advanced software solution is essential.

How GTMS can help you to manage warehouse and master data:

article management

with dimensions, special stock, cutting data, serial numbers, etc.

digital warehouse management

including stock development, reach prediction

automated inventory support

and minimum stock optimisation

online reservation

and picking of operating resources

secure management

of blanket orders, complaints, scale prices

various communication options

such as comments, messages, approval workflows

It is impossible to imagine tool management without Gühring.

Peter Brandstötter, Fill Gesellschaft m.b.H., Gurten

As a leading mechanical engineering firm, Fill believes in the importance of customer service. That's why its experienced service technicians are active around the world – equipped with protective equipment, tools and spare parts. But before every appointment do they really need to go to the effort of going to the headquarters and putting all this kit together? There is an easier way.

Thanks to GTMS, service technicians can now select their operating resources online and have the toolbox shipped or made available at their destination. And because this significantly reduces waiting and travel times, savings are made across the company.
