GTMS

Gühring Tool Management Software

Order module

More efficient with good planning

Your vision – our software

Individual & flexible

Your path to digitalisation

To digitise your entire production process, you need just one piece of software: Gühring Tool Management Software (GTMS). From automatic tool ordering through to analysing tool data, GTMS covers a company's most common requirements.

And through all of this, it always follows one goal:

Minimising your administrative workload and ensuring that everything you need is available in the right quantity, at the right place, and at the right time. And thanks to different modules, the software can be individually tailored to your needs and applications.

map the complete process & find potential savings

standardised processes ensure a higher product quality

transparency in production orders

recording of real times and costs incurred

No time for paperwork?

Because the focus in everyday routine is on the production of as many parts as possible, there is little time for paperwork. Anyone who does not document recurring work processes will lose time and money. Product quality often fluctuates and runtimes are not recorded, making recalculation impossible. Inadequate scheduling leads to delivery deadlines not being met. At the same time, it is difficult for those at management level to intervene as there is no transparency.

How GTMS can help you to manage jobs:

production order management

from interfaces or work plans

transaction

planning, monitoring and reporting

order status and production progress

is always clearly arranged and live

direct withdrawal booking

on an order-by-order basis

labour time and costs

analysis of actual values and comparison
with target figures

”GTMS has never let us down.

Heinrich Ruckenbauer, SFS Group Austria GmbH, Korneuburg

A very high hourly rate per order and no software that records this data on a component-by-component basis – that was the situation at SFS Group Austria. The manufacturer of automotive plastic parts was finding it impossible to document the planned hours of its machines with reliable figures. And this meant that follow-up calculations were inaccurate, deadlines were rarely met.

With GTMS, the SFS Group has digitalised the entire process related to order planning and has since managed to complete every order on time. For example, in 2023, the average deviation from schedule was only 0.9 days – even for projects that run for 4 to 16 weeks.
