Gühring Tool Management Software
»WE ARE READY FOR INDUSTRY 4.0«
For more than 15 years Gühring has successfully carried out tool management projects worldwide in a variety of extension levels. Small as well as medium-sized companies with individual and small batch production as well as enterprise customers with large batch production are supported by Gühring with full responsibility.

Because of the wide variation and the experience in implementing worldwide customer projects Gühring possesses an outstanding expertise in the tool management sector.

With this know-how Gühring can also support your company in specifically optimising your tool management.

All TM systems can be combined with each other and can be operated via the basic units of the TM 326 and TM 526 systems or via the TM 426 control terminal.
Whilst direct tooling costs reflect tool consumption they remain the target of optimisation in companies, indirect tooling costs are hidden in the process organisation of tool management. They are less transparent and less quantifiable. On the one hand indirect tooling costs are for example costs incurred through the necessary process organisation such as procurement, storage etc., on the other hand they are also costs arising from deficits in these management processes.

FOR THE COMPANY’S PRODUCTION IT MEANS:

- Interruption of production orders due to unavailable tools
- Insufficient transparency of tool stock and storage locations
- Increased time investment of foremen and machine operators due to unavailable tools
- Overstock or missing/understock in warehouse
- Increased tool variety
Any activities to optimise the process organisation and the costs connected that have to be carried out by employees responsible in addition to the daily work schedule are often neglected due to lack of time. This is where Gühring begins with its modular tool management concepts. You can receive all required components from one supplier – Gühring.

RE-ORGANISATION AND CONTROL OF YOUR TOOL MANAGEMENT

TRANSPARENCY OF ALL PROCESSES THANKS TO THE APPLICATION OF GÜHRING’S TOOL MANAGEMENT SOFTWARE

AUTOMATED TOOL DISPENSING SYSTEMS

GSS SHRINK FIT AND PRE-SETTING EQUIPMENT

FURTHER OPTIMISING DIRECT TOOLING COSTS. IDENTIFYING AND REDUCING INDIRECT TOOLING COSTS.
GÜHRING TOOL MANAGEMENT
CONCEPTS

LOGISTIC TOOL MANAGEMENT.

PERFORMANCE

Gühring as central logistics partner for the procurement of all products in the machining and production area

Article spectrum includes all types of cutting tools as well as accessories

The customer decides which tools are applied during the project

Scheduling and ordering of all tools to be applied including non-Gühring products

Monitoring delivery schedules

Tool availability including consignment stock

Monitoring stock levels

Gühring TM tool dispensing system for tool storage

Re-grinding and re-coating in Gühring service centres or with original supplier

Delivery of new and refurbished tools

Filling the Gühring TM tool dispensing system

Consumption and costing report

Monthly invoicing by Gühring based on withdrawn tools. Subcontractors paid by Gühring

ADVANTAGES

The customer can focus on core competences and value adding activities

Customer specific compilation of scope of performance

Only one contact person for the procurement of all tools and products

Reduction of tied-up capital thanks to consignment stock

Determining the cost reduction potential for indirect tooling costs

Cost transparency thanks to clear cost allocation and monthly consumption reports to various criteria such as time period, product, cost centre, tool type etc.

24 hour tool dispensing during partly unmanned shifts
TECHNOLOGICAL TOOL MANAGEMENT.

PERFORMANCE

- Responsibility of complete tool management
- Gühring project team including tool managers, application technicians and pre-setting personnel on-site
- Looking after Gühring tools and non-Gühring products – including turning, grinding, honing and assembly
- Scheduling and ordering all tools to be applied
- Monitoring delivery deadlines
- Incoming goods inspection
- Managing tool stock
- Assembly and pre-setting of tools
- Delivery of pre-set tools directly to manufacturing facilities
- Collection of worn tools from production area
- Disassembly and assessment of worn tools including wear analysis
- Dispatch of tools for refurbishment, i.e. re-grinding and re-coating
- Continuous technological improvements of tools and processes (CIP)
- Comprehensive reporting such as for example tooling costs per component, determining the cost driver per workpiece, documentation of tool life development
- Monthly invoicing by Gühring according to agreed modus, sub-contractors are paid by Gühring

ADVANTAGES

- Customer specific compilation of scope of performance
- Quick achievement of optimisation targets as Gühring tool managers can invest 100% of working time in optimisations
- Reduction of personnel costs in tool management
- Reduction of tied-up capital thanks to consignment stock
- Determining the cost reduction potential for indirect tooling costs
- Cost transparency thanks to clear cost allocation and monthly consumption reports to various criteria
GÜHRING TOOL MANAGEMENT
CONCEPT MODULES

Gühring’s tool management concepts are designed according to customer requirements. Long-term experience of the tooling sector, the technology and the professional handling of workflow and customer data form the optimal basis for a reliable and individual cooperation with Gühring as a partner. Tool management is divided into the following concept modules.

GTMS
Modern and practice-oriented tool management software from Gühring is the engine of tool management.

LOGISTICS
The GTMS triggers order suggestions as required and co-ordinates delivery and re-grind service.

SERVICE
Thanks to the co-ordinated delivery and re-grind service all production relevant working materials and tools are made available based on requirement and on time.

INTEGRATION
By incorporating the software in the existing customer infrastructure it provides support to all relevant tool management processes.

INTERFACES
With the assistance of interfaces GTMS connects to all ERP/PPS, CAD and IT systems. Also logistics systems like paternoster or shuttle systems can be controlled and managed.

IDENTIFICATION
Login is either by barcode, PIN, RFID or by biometric data.

ONLINE COMMUNICATION
GTMS enables data exchange via Intranet and Internet, web applications on tablet, smartphone and PC.

MACHINES
Multiplex dispensing systems offer solutions for various areas of application and security levels.
»OUR INTELLIGENT TM SOLUTIONS OPTIMISE YOUR TOOL MANAGEMENT.«
MillCraft 3D in Affalterbach is a young, fast growing company in the model mould and prototype construction sector. For the machining of high-tech materials the team applies the technology of Gühring to satisfy the high customer demands.

MillCraft 3D Managing Director Sven Goldschmidt appreciates the use of Gühring’s TM 326 tool dispensing system:

“For us, flexibility and speed, coupled with a high degree of quality, are enormously important. Here, Gühring’s tool dispensing system is a great help. As well as an accurate order management it guarantees us quick tool availability and is therefore indispensable in our daily work process.”
» GÜHRING’S TOOL DISPENSING SYSTEM IS INDISPENSABLE IN OUR DAILY WORK PROCESS. «
»TM 526 – OF ESSENTIAL BENEFIT TO OUR COMPANY.«

»SELF-EXPLANATORY SOFTWARE – TOOL SEARCH IS A THING OF THE PAST.«
"High-tech made in Regensburg" – how the dynamic company Aytec faces the challenges of its international customers. Here it relies on tools and dispensing systems from Gühring to guarantee the quality for manufacturing special machines.

Aytec Managing Director Christian Ruhland about the tool management:

"The controlled dispensing and the automatic re-ordering of tools is very important to us. With the Gühring tool dispensing system TM 526 required tools for the production process are always available and we can fully concentrate on our core competences. This is a significant benefit for our company."

The users Jonas Polleter and Paul Troppmann are also convinced of the Gühring tool dispensing system:

"Thanks to the GTMS self-explanatory software tool search is a thing of the past."

Jonas Polleter and Paul Troppmann | Company employees of AyTec
EDUR has been producing and selling state-of-the-art centrifugal pumps with high quality standards since 1927. The innovative pump technology of the EDUR pump factory has developed continuously over the decades and today sets new standards on the world market. The product range is the result of excellent engineering services, innovative manufacturing methods and a high level of quality and a forward-looking corporate philosophy.

EDUR Managing Director Dr. Glenny Holdhof on Tool Management:

“...We convince our customers with high-quality products and short delivery times. To achieve this, we rely on lean, flexible and efficient production processes. The Gühring Tool Management System supports us in an excellent way. It guarantees fast tool availability for work preparation and machine operators, so that our employees can concentrate on their core tasks.”

Dr. Glenny Holdhof | Managing Director EDUR
» THE GÜHRING TOOL MANAGEMENT PROVIDES EXCELLENT SUPPORT FOR OUR PRODUCTION PROCESSES. «
All Gühring tool dispensing systems are controlled by the user-friendly GTMS. It allows a simple, quick and intuitive operation via integrated touchscreen and provides the customer application and individual setting possibilities in all areas of production. Interfaces furthermore enable the connection to different merchandise management systems as well as an online connection to your suppliers thanks to automated order processes.

Thanks to the modular design processes in manufacturing can be accurately costumised and all aspects of the tool cycle, from provision and storage to disposal, can be transparently presented. The software documents all relevant movement data of stock, triggers order suggestions and enables evaluations to different criteria.

This comprehensive and detailed reporting offers your company a multitude of optimisation potentials in the tool cycle.

GÜHRING TOOL MANAGEMENT
TOOL DISPENSING SYSTEMS.
MACHINES AND STORAGE SYSTEMS

THE CORRECT SYSTEM
FOR ANY APPLICATION.
Classical production is undergoing profound change: Industry 4.0 is to combine industrial production with communication and information technology and thus contribute to increasing productivity and flexibility.

More than just dispensing systems - within the Tool Management service, Gühring provides its customers with the necessary data for a transparent machining process and optimises it.
Controlled storage and dispensing of tools is the basis for gaining tool consumption transparency and direct tooling costs. A prerequisite for this is however that tool stock is kept under lock and key and that every tool withdrawal is indeed registered in the management software. This is the only way to ensure that the stock displayed by the software physically exists and the tool scheduling can work reliably.

All systems are controlled by the GTMS logistics module. It enables a simple and intuitive operation of the dispensing machines.

Log-in is customer specific by PIN, barcode, RFID or biometric data. Depending on the system type tools can be stored and managed under different security levels. The Gühring dispensing systems TM 326, TM 426, TM 526 and TM 626 were developed for this purpose.

They are compatible to one another and can be adapted to various customer requirements for individual, small and large series production.

These Gühring TM tool systems therefore offer the decisive advantages of an intelligent tool dispensing system.

ADVANTAGES

- 24 hour controlled tool availability
- Reduction in storage and management costs
- Permanent consumption control
- Prevention of production stoppages
- Clear allocation of tooling costs
- Elimination of safety stock
- Storage and management of all articles relevant to production
- Eliminates loss and theft
- Employee awareness of tooling costs
- Communication with all IT systems possible
OPTIMISED MANAGEMENT PROCESSES. PERFORMANCE INCREASE IN TOOL MANAGEMENT.
TM 326
BASIC VERSION
TM 326 embodies a flexible storage solution for all application requirements for individual and small batch production. Electronically locked drawers can be individually adapted in height and partitioning options according to the article spectrum. It is ideal for accommodating different products in small quantities.

The storage module is the centrepiece of Gühring’s Tool Management Software that monitors and controls all movements. The system can be combined with all Gühring system types.
TM 326
DESIGNS AND DIMENSIONS

BASIC UNIT  EQUIPMENT

- Electronically locked dispensing system in a rigid steel sheet construction
- Manually operated drawers with LED display and full pull-out (load capacity per drawer max. 200 kg)
- Individual drawer height and partitioning options
- Height: 1700 mm (incl. attachment)
  Usable height: 900 mm
- PC with WIN 10, 64 Bit
- Scanner for reading barcodes and QR codes
- 21.5” HD touchscreen monitor
- Storage module of Gühring TM software
- Operating manual available

OTHER

- Lift truck base with removable front panel
- Special colours to RAL | NCS on request
- Operating voltage: 230 V | 50 Hz

TM 526
DRAWER SYSTEM

ACCESS ELECTRONICALLY LIMITED.
TRANSPARENT TOOL MOVEMENTS.
100% DISPENSING CONTROL.
The TM 526 system has been designed for large batch production with high product turnover rate. The individual drawer gradually opens when operated, this means only the respective booked quantity is dispensed. This results in 100% tool withdrawal transparency as well as a clear allocation of tooling costs.
